PROPOSED SYLLABUS FOR RESEARCH ELIGIBILITY TEST (R. E. T.)

IN ZOOLOGY

2020

DEPARTMENT OF ZOOLOGY
DIAMOND HARBOUR WOMEN'S UNIVERSITY

SYLLABUS FOR RESEARCH ELIGIBILITY TEST (R. E. T.) IN ZOOLOGY

Diamond Harbour Women's University

1. BIOMOLECULES AND THEIR INTERACTION

a. Composition, structure, conformation and function of biomolecules (carbohydrates, lipids, proteins, nucleic acids and vitamins).
b. Bioenergetics, glycolysis, oxidative phosphorylation, coupled reaction, group transfer, biological energy transducers.
c. Enzymes: Principles of catalysis, kinetics, regulation, mechanism of action
d. Metabolism of carbohydrates, lipids, amino acids nucleotides and vitamins.

2. CELLULAR ORGANIZATION

a. Structural organization of membrane and function and transport.
b. Structure and function of intracellular organelles (nucleus, mitochondria, Golgi bodies, lysosomes, endoplasmic reticulum, peroxisomes).
c. Organization of genes and chromosomes (Operon, unique and repetitive DNA, interrupted genes, gene families, structure of chromatin and chromosomes, heterochromatin, euchromatin, transposons).
d. Cell division and cell cycle (steps, regulation and control).

3. GENETICS

a. Central dogma: DNA replication, repair and recombination; Transcription Mechanism, regulation and post transcriptional modifications; Protein synthesis, regulation and Post-translational modification of proteins
b. Control of gene expression at transcription and translation level
c. Mendelian principles: Dominance, segregation, independent assortment.
d. Concept of gene : Allele, multiple alleles, pseudoallele, complementation tests
e. Extensions of Mendelian principles: Codominance, incomplete dominance, gene interactions, pleiotropy, genomic imprinting, penetrance and expressivity, phenocopy, linkage and crossing over, Gene mapping methods, Inheritance of Mitochondrial genes, maternal inheritance.

f. Human genetics: Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders.
g. Quantitative genetics: Polygenic inheritance, heritability and its measurements, QTL mapping.
h. Mutation: Types, causes and detection, mutant types – lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis.
i. Structural and numerical alterations of chromosomes: Deletion, duplication, inversion, translocation, ploidy and their genetic implications.

4. CELLULAR COMMUNICATION AND SIGNALING

a. Host parasite interaction Recognition and entry processes of different pathogens like bacteria, viruses into animal host cells, alteration of host cell behavior by pathogens, virus-induced cell transformation, pathogen-induced diseases in animals, cell-cell fusion in both normal and abnormal cells.
b. Innate and adaptive immune system: Cells and molecules involved in innate and adaptive immunity, antigens, antigenicity and immunogenicity. B and T cell epitopes, structure and function of antibody molecules. generation of antibody diversity, monoclonal antibodies, antibody engineering, antigen-antibody interactions, MHC molecules, antigen processing and presentation, activation and differentiation of B and T cells, B and T cell receptors, humoral and cell-mediated immune responses, primary and secondary immune modulation, the complement system, Toll-like receptors, cell-mediated effector functions, inflammation, hypersensitivity and autoimmunity, immune response during bacterial (tuberculosis), parasitic (malaria) and viral (HIV) infections, congenital and acquired immunodeficiencies, vaccines.
c. Cell signaling: Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors, signal transduction pathways, second messengers, regulation of signaling pathways,
d. Cellular communication Regulation of hematopoiesis, general principles of cell communication, cell adhesion and roles of different adhesion molecules, gap junctions, extracellular matrix, integrins, neurotransmission and its regulation.

e. Cancer: oncogenes, tumor suppressor genes, genetic rearrangements and the cell cycle, causes, progression and treatments.

5. DEVELOPMENTAL BIOLOGY

a. Basic concepts of development : Potency, commitment, specification, induction, competence, determination and differentiation; morphogenetic gradients; cell fate and cell lineages; stem cells; genomic equivalence and the cytoplasmic determinants; imprinting;
b. Gametogenesis, fertilization and early development
c. Morphogenesis and organogenesis in model animals : axes and pattern formation in Drosophila, amphibia and chick; organogenesis – vulva formation in Caenorhabditis elegans, eye lens induction, limb development and regeneration in vertebrates; differentiation of neurons, post embryonic development- larval formation, metamorphosis; environmental regulation of normal development; sex determination.
d. Programmed cell death, aging and senescence

6. ANIMAL PHYSIOLOGY

a. Blood and circulation: Blood corpuscles, haemopoiesis, blood volume regulation, blood groups, immunity, haemostasis.
b. Cardiovascular System: Comparative anatomy of heart structure, myogenic heart, specialized tissue, ECG – its principle and significance, neural and chemical regulation of cardiac cycle, blood pressure.
c. Respiratory system: Comparison of respiration in different species, anatomical considerations, transport of gases, exchange of gases, waste elimination, neural and chemical regulation of respiration.
d. Nervous system: Neurons, action potential, gross neuroanatomy of the brain and spinal cord, central and peripheral nervous system, neural control of muscle tone and posture.
e. Sensory system: Vision, hearing and tactile response.
f. Excretory system: Comparative physiology of excretion, structure and function of kidney, urine formation
g. Thermoregulation: body temperature – physical, chemical, neural regulation, acclimatization.

h. Digestive system - Digestion, absorption, energy balance, BMR.
i. Endocrinology and reproduction - Endocrine glands, basic mechanism of hormone action, hormones and diseases; reproductive processes, gametogenesis, ovulation, neuroendocrine regulation

7. DIVERSITY OF LIFE FORMS:

a. Principles & methods of taxonomy: Concepts of species and hierarchical taxa, biological nomenclature, classical & quantitative methods of taxonomy of animals.
b. Outline classification of animals: Important criteria used for classification in each taxon. Classification of animals, Evolutionary relationships among taxa. Unicellular, colonial and multicellular forms.
c. Natural history of Indian subcontinent: Major habitat types of the subcontinent, geographic origins and migrations of species. Common Indian mammals, birds. Seasonality and phenology of the subcontinent.
d. Organisms of health & agricultural importance: Common parasites and pathogens of humans, domestic animals and crops.

8. ECOLOGICAL PRINCIPLES

a. The Environment: Physical environment; biotic environment; biotic and abiotic interactions.
b. Habitat and Niche: Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement.
c. Population Ecology: Characteristics of a population; population growth curves; population regulation; life history strategies (r and K selection); concept of metapopulation – demes and dispersal, interdemic extinctions, age structured populations.
d. Species Interactions: Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis.
e. Community Ecology: Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones.
f. Ecological Succession: Types; mechanisms; changes involved in succession; concept of climax.

g. Ecosystem Ecology: Ecosystem structure; ecosystem function; energy flow and mineral cycling (C,N,P); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine).
h. Biogeography: Major terrestrial biomes; theory of island biogeography; biogeographical zones of India.
i. Applied Ecology: Environmental pollution; global environmental change; biodiversity: status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches.
j. Conservation Biology: Principles of conservation, Rare, endangered species. Conservation strategies, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves). Resource Management: Renewable and non-renewable resources, Conservation of Natural Resources, Land use and management.

9. EVOLUTION AND BEHAVIOUR

a. Lamarck; Darwin–concepts of variation, adaptation, struggle, fitness and natural selection; Mendelian genetics; Spontaneity of mutations; The evolutionary synthesis.
b. Origin of cells and unicellular evolution: Origin of basic biological molecules; Abiotic synthesis of organic monomers and polymers; Concept of Oparin and Haldane; Experiment of Miller (1953); The first cell; Evolution of prokaryotes; Origin of eukaryotic cells; Evolution of unicellular eukaryotes; Anaerobic metabolism, photosynthesis and aerobic metabolism.
c. Paleontology and Evolutionary History: The evolutionary time scale; Eras, periods and epoch; Major events in the evolutionary time scale; Origins of unicellular and multi cellular organisms; Major groups of animals; Stages in primate evolution including Homo.
d. Molecular Evolution: Concepts of neutral evolution, molecular divergence and molecular clocks; Molecular tools in phylogeny, classification and identification; Protein and nucleotide sequence analysis; origin of new genes and proteins; Gene duplication and divergence.

e. Population genetics – Populations, Gene pool, Gene frequency; Hardy-Weinberg Law; concepts and rate of change in gene frequency through natural selection, migration and random genetic drift; Adaptive radiation; Isolating mechanisms; Speciation; Allopatricity and Sympatricity; Convergent evolution; Sexual selection; Co-evolution.

f. Animal behavior: Proximate and ultimate causation; Altruism and evolution-Group selection, Kin selection, Reciprocal altruism; Neural basis of learning, memory, cognition, sleep and arousal; Biological clocks; Development of behavior; Social communication; Social dominance; Use of space and territoriality; Mating systems, Parental investment and Reproductive success; Parental care; Aggressive behavior; Habitat selection and optimality in foraging; Migration, orientation and navigation; Domestication and behavioral changes.

10. APPLIED BIOLOGY:

a. Application of immunological principles, vaccines, diagnostics. Tissue and cell culture methods for animals.

b. Transgenic animals, vermiculture and vermicomposting.

c. Genomics and its application to health and agriculture, including gene therapy.

d. Bioremediation and phytoremediation

e. Biosensors

f. Drug delivery and targeting

11. METHODS IN BIOLOGY

a. Molecular Biology and Recombinant DNA methods: Isolation and purification of RNA, DNA (genomic and plasmid) and proteins, different separation methods, gel electrophoresis, Isoelectric focusing gels; Molecular cloning of DNA or RNA fragments, Expression of recombinant proteins using bacterial, animal vectors. Generation of genomic and cDNA libraries in plasmid, phage, cosmid, BAC and YAC vectors. In vitro mutagenesis and deletion techniques, gene knock out in bacterial and eukaryotic organisms. Protein sequencing methods, detection of post translation modification of proteins. DNA sequencing methods, strategies for genome sequencing. Methods for analysis of gene expression at RNA and protein level, large scale expression, such as micro

array based techniques Isolation, separation and analysis of carbohydrate and lipid molecules RFLP, RAPD and AFLP techniques

b. Histochemical and Immuno-techniques: Antibody generation, Detection of molecules using ELISA, RIA, western blot, immunoprecipitation, flowcytometry and immunofluorescence microscopy, detection of molecules in living cells, in situ localization by techniques such as FISH and GISH.
c. Biophysical Method: Molecular analysis using UV/visible, fluorescence, circular dichroism, NMR and ESR spectroscopy Molecular structure determination using X-ray diffraction and NMR, Molecular analysis using light scattering, different types of mass spectrometry and surface plasma resonance methods.
d. Statistical Methods: Measures of central tendency and dispersal; probability distributions (Binomial, Poisson and normal); Sampling distribution; Difference between parametric and non-parametric statistics; Confidence Interval; Errors; Levels of significance; Regression and Correlation; t-test; Analysis of variance; X2 test; Basic introduction to Multivariate statistics, etc.
e. Microscopic techniques: light microscopy, resolving powers of different microscopes, microscopy of living cells, scanning and transmission microscopes, different fixation and staining techniques for EM, freeze-etch and freeze- fracture methods for EM, image processing methods in microscopy.
f. Electrophysiological methods: Single neuron recording, patch-clamp recording, ECG, Brain activity recording, lesion and stimulation of brain, pharmacological testing, PET, MRI, fMRI, CAT.
g. Methods in field biology: Methods of estimating population density of animals, ranging patterns through direct, indirect and remote observations, sampling methods in the study of behavior, habitat characterization: ground and remote sensing methods
